

# A SIMPLE GUIDE TO PRIVACY, SECURITY, AND COMPLIANCE FOR GENERATIVE AI

---

**NIGEL GOODING AND NISH IMTHIYAZ**

How has your year been, and what have you been up to in the world of data protection and AI?

Reflecting on the past year, what have been the most significant trends or challenges you've noticed in the intersection of data protection and AI?

With the rapid deployment of AI systems, what strategies do you recommend for practitioners to ensure compliance with ever-changing data protection regulations?

How do you balance the potential of AI innovation with the pressing need for safeguarding personal data—do you ever feel these priorities conflict?

We are going to get new Data Protection legislation this year, with an implementation date sometime in the future. How are you preparing, and what advice can you give delegates here to help them get ready?

If you could change one aspect of current data protection frameworks to make them more practical for dealing with AI, what would it be?
